CONFIDENTIAL/SECURITY INFORMATION

. 2 -

- 4. The department of bicchemistry is conducting research in nutrition directed at factory labor class. Recommendations for diet improvement have been presented but wage level of workers precludes heeding the advice.
- 5. Laboratory items required by anatomy department to further research include histochemistry equipment such as dry freezing appearatus, glassware and reagerts. MBA grants have not covered this need and university funds are insufficient to enable purchase in foreseeable future. Anatomy department has 80 good microscress and is supplied free of charge with 20 human cadevers per year.
- 6. US manufactured medical equipment is relied upon almost exclusively. However, Japanese manufactured equipment is again becoming available. Quality is adequate for Chinese medical standards. Japanese electron microscopes may be purchased for about US\$2 thousand.
- 7. Formerly, high school graduates were admitted to Taiwan University Madical School. Beginning in 1951 a two year college level pre-medical course consisting of physics, chemistry, biology and math became mandatory and a pre-requisite for consideration. About 80 first year students are selected out of roughly one thousand applicants. Attrition rate is about 10 15 per cent. Course is four years with a fifth year of internship. Quality of students is good but they are handcapped by poor training facilities.
- 8. Veterinary training is conducted by University, of Taiwar Department of Agriculture.
